

- How do humans process information the fastest?
→ Eyes / Visually

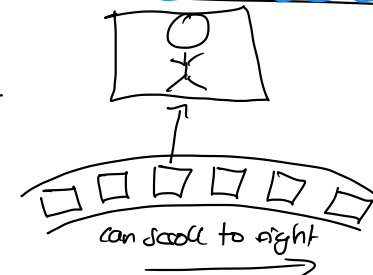

- some form of separation between iframe and webapp in an visual way to allow us
 - actions should not be displayed on our command only on request
 - some with photos
 - Clarification, visually (speech, voice (no text!))

- Create a new project
- Give initial prompts and see the 6 different project versions running
- Navigate browser through voice (both ifram and webbrowser)
- Select and scroll through pictures
- Show speech when there is incoming TTS for repeats
- Show action/status on request
- (Badge appearance)
- Set timer
- Show/embed QR code

"Hey can you build me a website of x"

→ We take 6 different

~ Can you show me the one in middle?
~ "OU select it and insert it here"

→ "I want to add a button here, can you show me some ideas / variations?"

↳ React Bits Card Nav
